

Can I model the Home Energy Scotland Grant funding in Heatpunk?

Yes, you can. The [Financial Task](#) features an updated option for additional grants that fully supports the Home Energy Scotland (HES) scheme.

Total before VAT	£17,538.30
VAT at 0%	£0.00
Total payable including VAT	£17,538.30
Home Energy Scotland Grant	-£7,500.00
Effective cost to customer	£10,038.30

How to configure HES grant in your project

1. Navigate to the Financial task. Click the 'Financial inputs' button in the top right and select **Grant**.

2. Set the grant description to **Home Energy Scotland Grant**. This is how it will appear on the quote.
3. Enter the grant value. This is £7,500 for standard homeowners and can be uplifted to £9,000 for rural locations.

Grant description	Grant value	Type
Home Energy Scotl...	£ 7500.00	

4. Set the 'Type' dropdown to **Claimed afterwards**.

Unlike England's Boiler Upgrade Scheme (where the installer receives the voucher directly), the Scottish Government requires the customer to claim the funding back after the work is complete. Selecting "Claimed afterwards" ensures that: The correct effective cost is shown to the customer in their proposal. The gross amount due to the installer remains completely accurate so you get paid correctly.
