

# How do the pink handles function?

The draggable pink handles are used for adjusting the size and shape of rooms. Initially they are set in the 'locked' function which allows you to drag that particular point, altering the size of the room while keeping the shape uniform. This setting can be changed by clicking on a point and selecting the alternative 'unlock' function which enables you to alter the angle at that point and thus create custom shapes.

For more help on this topic, see our guide on [Creating Rooms](#).
