Choose your material palette

A material palette is a pre-defined set of material choices that can be used for accurate room-by-room heat loss calculations. You can choose from:

- Heatpunk's default materials palette based on 2022 Building Regs.
- Using one of your own custom palettes or a team-managed palette.
- Starting from fresh with the blank project palette to set the construction type (u-values) for all the building elements.

More about [choosing a materials palette](#) and [managing custom materials palettes](#).
