Choose your material palette

A material palette is a pre-defined set of material choices that can be used for accurate room-by-room heat loss calculations. You can choose from Heatpunk's default materials palette based on 2022 Building Regs, use one of your own custom palettes or a team-managed palette, or start from fresh with the blank project palette to set the construction type (u-values) for all the building elements. More about [choosing a materials palette](#) and [managing custom materials palettes](#).

Create the first level of your floor plan

Input the name and default ceiling height for the rooms on this level of your floor plan.

Level Description

Fill out the details for this level. Add or edit the level name, and enter the default ceiling height.

Floor Name

Ground floor

Room Ceiling Height

2400mm

Cancel

Confirm

Click **confirm** to load the floor plan task. You're ready to start building your floorplan and generating a full room-by-room heat loss calculation. [Next read our detailed user guides for the Floor Plan Task.](#)
