Floor plan task improvements

Following our recent floor plan update, we've rolled out a few highly requested tweaks to improve clarity both for your teams on-site and your customers:

- **Upgraded Sound Assessment:** We've streamlined the sound assessment workflow workflow, making it easier to evaluate noise levels for both single and multiple heat pump installations.
- **Clearer system layout in customer proposal:** Helps homeowners clearly understand where key items are being installed.
- **Room dimensions in technical report:** To better support your installation teams on site, the technical report now includes room dimensions by default.
- **Room notes in technical report:** Your survey and design notes now pull through to the technical report on a room-by-room basis, giving your installers full visibility.

Revision #1
