

New in August 2026

Updates

- Solax heat pumps have been added to the heat pump kit builder. If you specify one of these units in Heatpunk, you will have a list of suggested accessories to confirm and add to your project.
- Added undo and redo functionality to the [floor plan task](#) to compliment the copy and paste update in July.
- We have improved the output of the data associated with cascaded heat pump systems ensuring all data is presented correctly and clearly for systems with more than 1 heat pump. This corresponds to improvements to the Customer Proposal to clear up visual errors and cascaded heat pump data.

Fixes

- Fixed 'Automatic Pricing' not pulling through to quotes when using a lookup table for Heatpunk Pro users.
- Fixed accessory pricing not pulling through.
- Fixed the floor plan upload failing with a project ID error, and the floor plan getting stuck on the first floor.
- Fixed the installation record not loading.
- Fixed page breaks around assessment points in the customer proposal sound check.
