

New in July 2026

Updates

- Finance and payment options are now available to configure in Heatpunk
 - [Add and configure 'Pay in full' and 'finance' payment options](#) in your 'Preferences' or 'Pro Account Settings'.
 - These can be selected during the 'Financial' task and presented to your customer within the 'Customer Proposal'.
- Grants and funding options now have [increased flexibility](#):
 - Grants can be manually edited, enabling the inclusion of the Off-gas Grid BUS voucher and the Home Energy Scotland Grant and Loan.
 - Funding options can specify when the capital is claimed to support the scheme variations present in the UK.
- Towel rails have been added as a standard radiator option, no longer requiring a custom entry. Simply select them like our other standard K1, K2, K3, & P+ models.
- [Copy and paste](#) of rooms, windows, doors and radiators has been added to the plans task. Use `CTRL + C` / `CTRL + V` (`CMD + C` / `CMD + V` on Mac), reducing manual data entry associated with building your Heatpunk floor plan.
- Whole building fabric and ventilation heat loss breakdown has been added.
- Customer Proposal & quote formatting has been improved to reduce errors when large lists are present.

Fixes

- Fix to radiator widths not updating and all radiators reverting to the palette default when the default is changed.
- Fix to the floor plan occasionally needing to be reloaded breaking when navigating between floors.
- Fix to windows and doors unsnapping from walls when entering the floor plan task.
- The cylinder selection will now always appear on the customer proposal diagram.
- The MCS sound assessment now includes position 'B'. It was previously skipping to 'C'.
